TECHNICAL SKILLS

Languages: Java [Advanced], JavaScript [Intermediate], Python [Basic], C++ [Basic]

Frontend: React.js, HTML5, CSS3, Bootstrap, Three.js, Chart.js

Backend: Spring Boot 3, Spring AI, Node.js, Express.js, Django 5, Java Servlets, REST API

Databases: MySQL, MongoDB, Oracle

Dev Tools: Git, GitHub, Docker, AWS, Postman, Maven, VS Code, Eclipse, YOLOv8, OpenCV, Google Gemini 2.5 Flash

PERSONAL STATEMENT

Full-stack developer with 2+ years of production experience across Java/Spring Boot, React, Node.js, Django, and AI/ML integration (YOLOv8, Google Gemini 2.5 Flash). Shipped secure payment systems handling live US client transactions with zero security incidents, and built real-time AI proctoring used for classroom monitoring. Strong in Data Structures and Algorithms — solved 500+ problems on LeetCode, top 5% on GeeksForGeeks. Currently mentoring 2,223 students at Kalvium while contributing to platform engineering.

EXPERIENCE

Kalvium | Technical Mentor & Developer

Oct 2024 – Present

- Mentored 2,223 students in DSA, full-stack development, and competitive programming, driving placements at top product-based MNCs.
- Designed and delivered 10+ live-coding workshops and technical sessions on real-world engineering practices, rated $\geq 4.5/5$ by participants.
- Guided 3 students from zero coding background to job offers within 6 months through personalised roadmaps and mock interview loops.
- Contributed to Kalvium platform engineering — built and shipped React/Node.js features to production alongside full-time mentoring responsibilities.

NeXTIn Technologies | Full-Stack Developer Intern (MERN)

Jan 2024 – Mar 2024

- Built and shipped a complete full-stack web application — auth flow, dashboard, and data tables — delivering the feature 2 weeks ahead of schedule.
- Reduced average API response latency by $\sim 35\%$ by refactoring Node.js middleware and introducing query-level caching on critical endpoints.
- Resolved 20+ reproducible production bugs in 6 weeks through systematic root-cause analysis, improving release stability and reducing QA rework cycles.

Resultant (Java) | Software Developer Intern (Remote, USA)

Jun 2022 – Sep 2023

- Engineered a secure payment interface for a live US client application — zero security incidents across a 15-month production lifecycle.
- Built 12+ REST APIs using Java 8 and Spring Boot serving as the integration backbone across 3 frontend applications and the Oracle/MySQL database.
- Optimised 5 high-traffic database queries reducing average execution time by 40%, supporting a 30% increase in concurrent users — live at resultanttech.com.

PROJECTS

CheatGuard AI — Classroom Cheating Detection | [GitHub](#)

2026

- Built a real-time AI proctoring system using YOLOv8 + YOLOv8-Pose detecting phone usage, abnormal posture, seat abandonment, and document passing — 4 modules running concurrently on live webcam and uploaded video feeds.
- Engineered configurable detection thresholds via Django settings and delivered a glass morphism UI with Three.js animated backgrounds and Chart.js live dashboards.
- Automated classroom invigilation — reduces manual video review time to zero, enabling institutions to flag academic dishonesty instantly at scale.

AI Chatbot Backend — Spring Boot + Google Gemini | [GitHub](#)

2026

- Designed and shipped a clean REST API (POST /api/chat) integrating Google Gemini 2.5 Flash via Spring AI — responses under 200ms end-to-end.
- Implemented a 4-layer architecture (Client → Controller → Service → Spring AI → Gemini) enabling AI provider swap without touching business logic.
- Identified and documented production security gaps (API key exposure, open CORS, no auth) and designed JWT + rate-limiting roadmap for production hardening.

LifeManager — Personal Financial Management App | [GitHub](#)

2026

- Built a full-featured personal finance platform covering expense CRUD, card management, document uploads, and a real-time dashboard using Java Servlets, JSP, and MySQL.
- Designed a normalised 4-table relational schema with FK constraints and used prepared statements throughout — achieving zero SQL injection surface.
- Applied DAO pattern (8 classes) for clean data-access separation; deployed on Jetty via Maven with zero production downtime.

EDUCATION

B.Tech in Computer Science & Engineering | CGPA: 9.60 / 10 (Batch Topper)

2019 – 2023

Campus: Bhopal, Madhya Pradesh | Corporate Institute of Science and Technology

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Software Engineering.

ACHIEVEMENTS

- Solved **500+ DSA** problems on **LeetCode** and ranked in the **top 5%** on **GeeksForGeeks** — consistent competitive programming track record.
- Won 1st place in inter-college C++ coding competition — recognised for problem-solving speed and code optimisation over 200+ participants.
- Ranked **#1** academically throughout B.Tech (CGPA 9.60 — Batch Topper); completed Full-Stack Development Training at JSpider alongside degree with zero backlogs.
- **Mentored 2,223** students at Kalvium in DSA and full-stack engineering; conducted 10+ technical workshops driving measurable MNC placement outcomes like (Lowe's , Morgan Stanley etc..)
- Consistently active in open-source contributions and personal projects integrating AI/ML (YOLOv8, Google Gemini) — bridging academic learning with real-world engineering delivery.
